New Features in Primavera Analytics 15.2

New features include:

- Notebook topics
- Historic trend analysis on UDFs
- Business process workflow analytics
- Summary sheet analytics
- Automatic association of vendors and related business processes
- Conformed dimensions
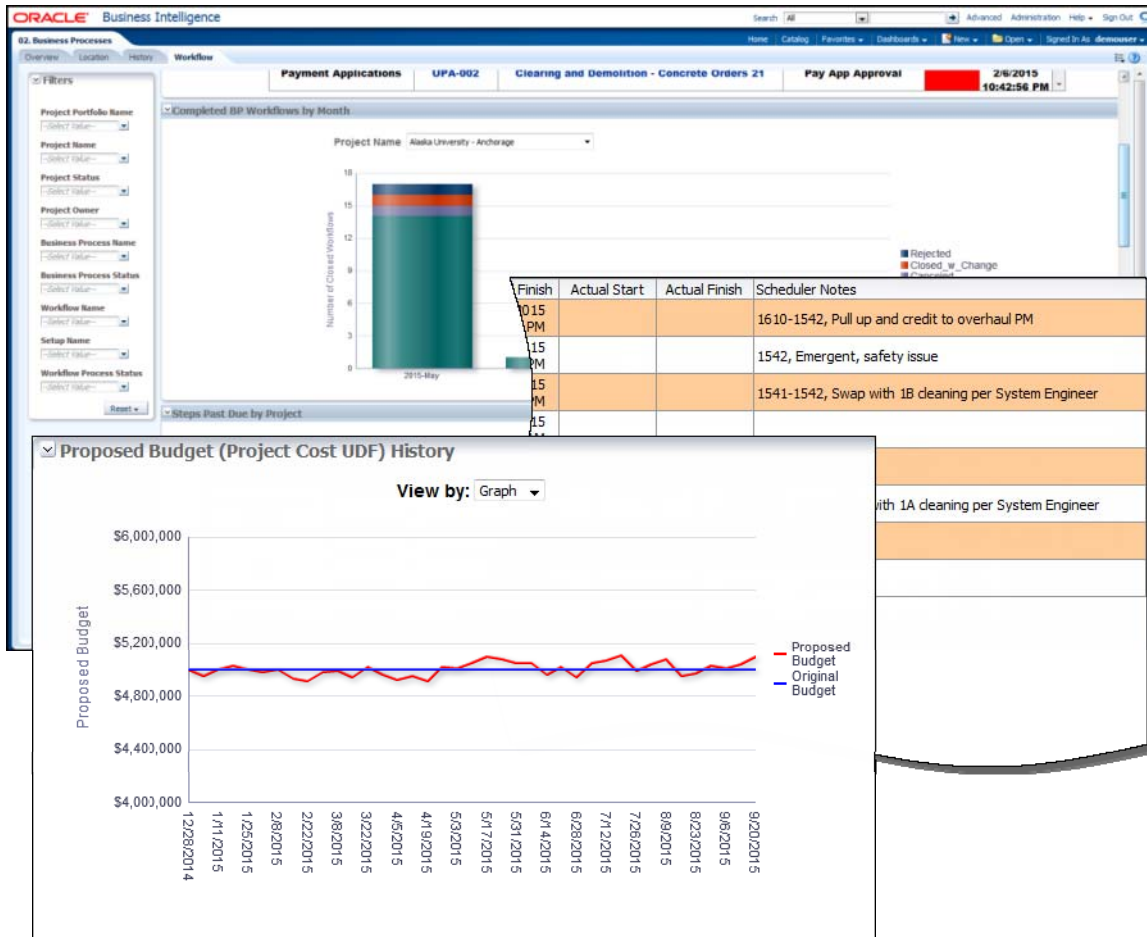

Notebook Topics

Notebook topic details can now be viewed directly in Primavera Analytics, making it possible to add important context to the P6 data displayed in dashboards and analyses. Project, EPS, WBS, and Activity Notebook Topics are supported.

Finish	Actual Start	Actual Finish	Scheduler Notes
0 15 PM			1610-1542, Pull up and credit to overhaul PM
15 PM			1542, Emergent, safety issue
15 M			1541-1542, Swap with 1B cleaning per System Engineer
15 AM			
0 15 0 PM			
20 15 00 PM			1542-1541, Swap with 1A cleaning per System Engineer
/20 15 :00 AM			
16/20 15 00:00 PM			

View Notebook Topic details directly in Primavera Analytics 15.2.

To access this feature: Select the appropriate Notebooks Topics name and text columns when creating an analysis.

Historic Trend Analysis on UDFs

Track business data captured in Primavera P6 user-defined fields (UDFs) to gain valuable insight into history and trends. New historical subject areas in Analytics 15.2 support cost, integer, and number UDFs for activity, project, resource, resource assignment, and WBS.
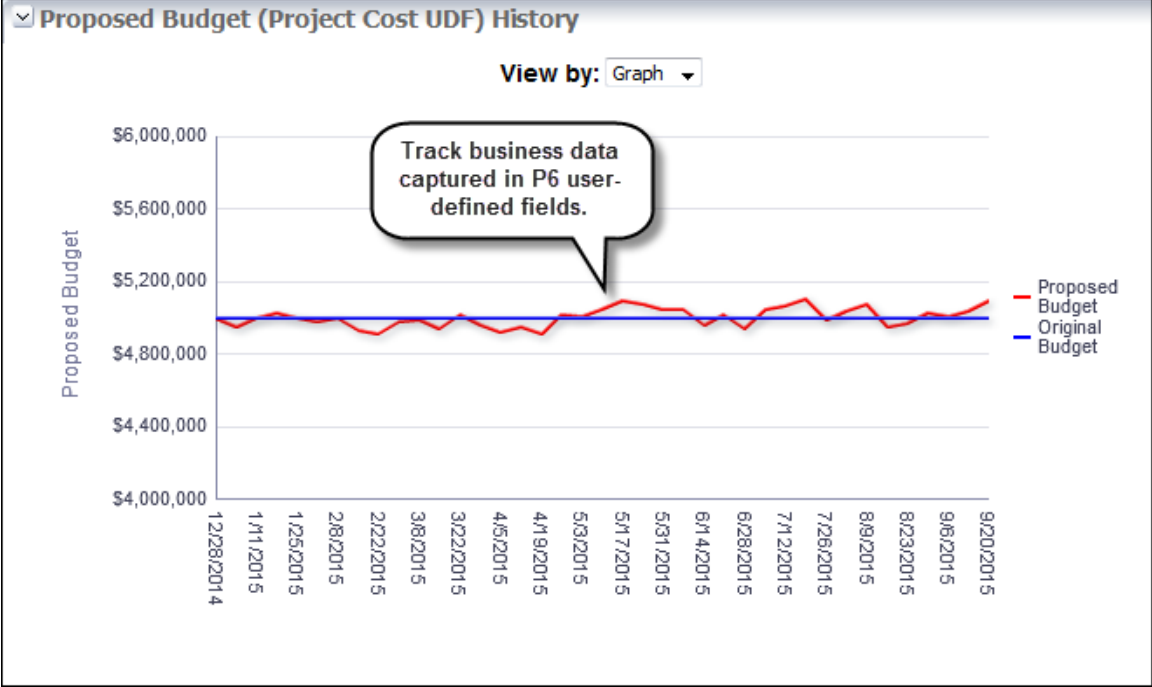

To access this feature: Select the appropriate History Facts columns when creating an analysis.

Business Process Workflow Analytics

A new preconfigured Workflow tab on the Business Processes dashboard provides insight into workflow productivity to help you pinpoint issues and bottlenecks. Compare planned and actual durations to identify divergence between business process planning and execution. View past due workflows and then drill down for the details, including the resources involved.
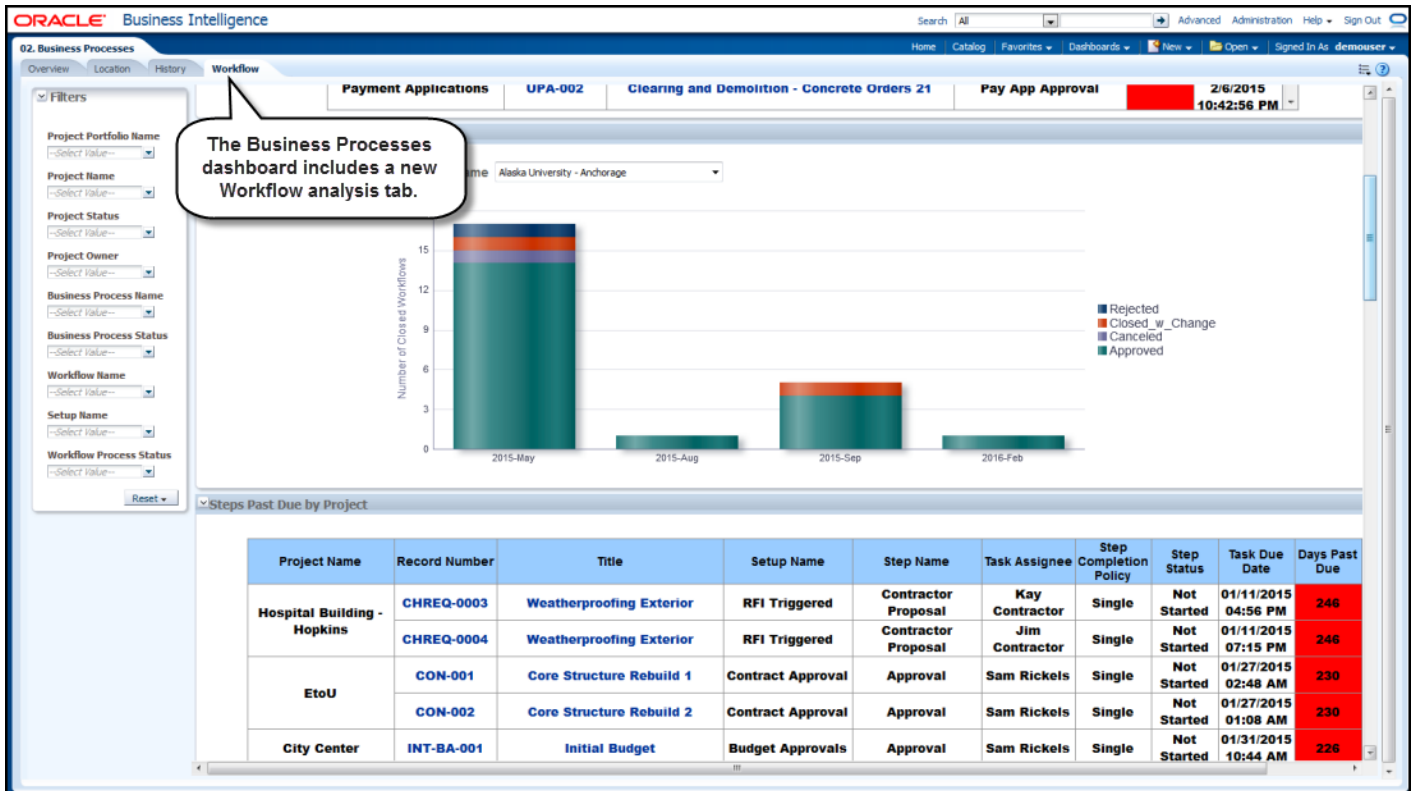

To access this feature: On the Business Processes dashboard, click the Workflow tab.

P6 Summary Sheet Analytics

You can now analyze resource data coming from Unifier's P6 Summary Sheets. Aggregate to any level in the project hierarchy or Cost Breakdown Structure and drill down to daily metrics. Compare the current project summary sheet to baselines to assess and understand changes.
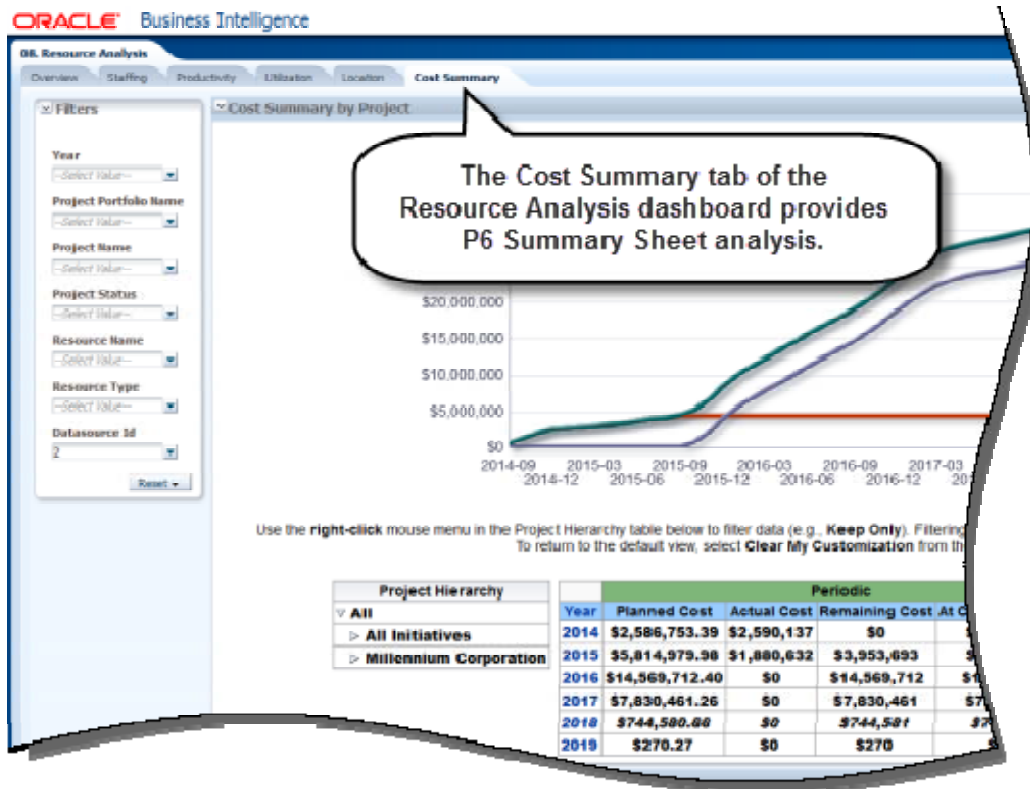

Additional Enhancements

Expanded Insight for Project Shells and Business Processes: Primavera Analytics 15.2 supports more than 100 new data elements on project shells and business processes to enable broader understanding and deeper analysis capabilities. The new data elements are Primavera Unifier user-defined fields (UDFs) that can now be captured in the ETL process. You can choose which data elements map into Primavera Analytics.

Vendor and Business Processes: Relevant business processes are now automatically associated with the assigned vendor, enabling you to more easily analyze vendor data and trends.

Supporting Conformed Dimensions with P6 and Unifier: Combine schedule data from P6 and cost data from Unifier in the same analysis or dashboard by leveraging conformed dimensions. Conformed dimensions have the same meaning for every fact to which they relate, allowing facts to be categorized and described in the same way across multiple facts or data tables. Facts that share the same conformed dimensions -- even facts from different Primavera Analytics subject areas -- can be combined in the same analysis or dashboard. Support for conformed dimensions includes Project ID, Project Name, Portfolio, and more.

The analysis below combines actuals data from the Primavera Activity (P6) subject area with baseline data from the Primavera Cost Sheet (Unifier) subject area.

Project Id	Project Name	Date Hierarchy	P6 EPPM		UNIFIER		
			Actual Total Cost	At Completion Total Cost	Initial Baseline	Current Baseline	Forecast
EC00610	Harbour Pointe Assisted Living Center	▽ Total	$895,554	$4,477,050	$3,240,000	$4,063,335	$4,371,796
		▷ 2014	$518,027	$518,027	$2,006,667	$1,983,752	$1,884,565
		▷ 2015	$377,526	$1,075,656	$1,113,333	$1,788,252	$2,103,064
		▷ 2016		$2,351,899	$120,000	$291,331	$374,167
		▷ 2017		$531,468	$0	$0	$10,000
